Airless JETSPRAY

JETSPRAY agitates and sprays any liquid that flows freely including:

Abrasives • Emulsions • Asphalt base coatings including fine fibres • Vinyl and acrylic coatings • Hypalon • Fireproofing for shingles or shakes • Dampproofing and foundation waterproofing materials • Agricultural applications (hydroseeding and pesticides) • Color coatings (rock landscaping, reflective roofing).

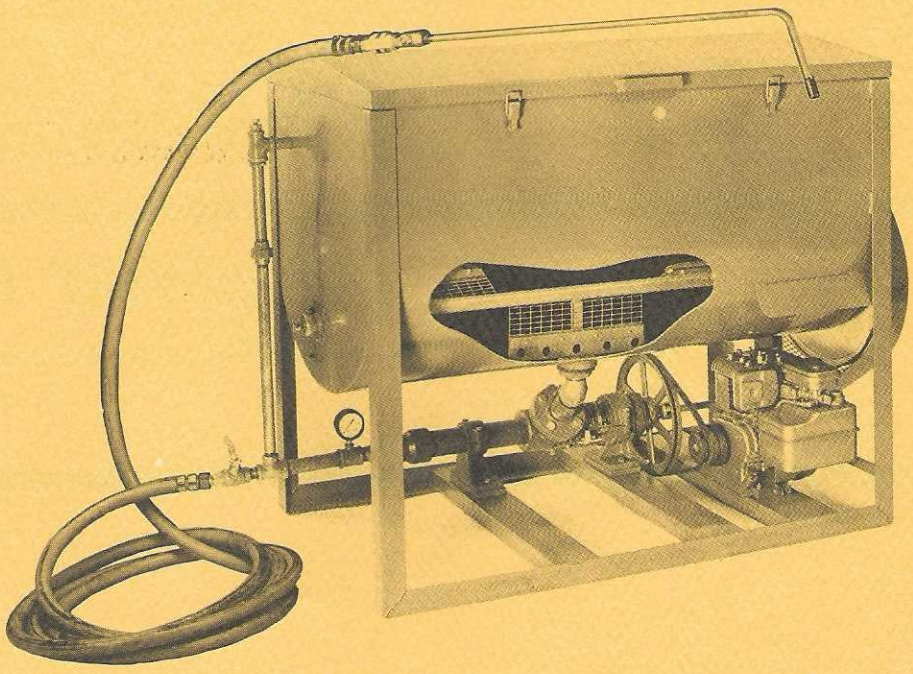

Portability is a prime JETSPRAY feature since the tank, pump and engine are all contained in the single unit.

JETSPRAY's tank contains a full length tank agitator which ensures uniform mixing and continuous, even application.

JETSPRAY uses a pumping principle that combines simple design and rugged construction in an AIRLESS coating machine.

JETSPRAY is a single unit machine requiring one operator who maintains absolute flow control with ease at the nozzle. An adjustable pressure relief valve system feeds material back to the tank when flow is shut off at the nozzle.

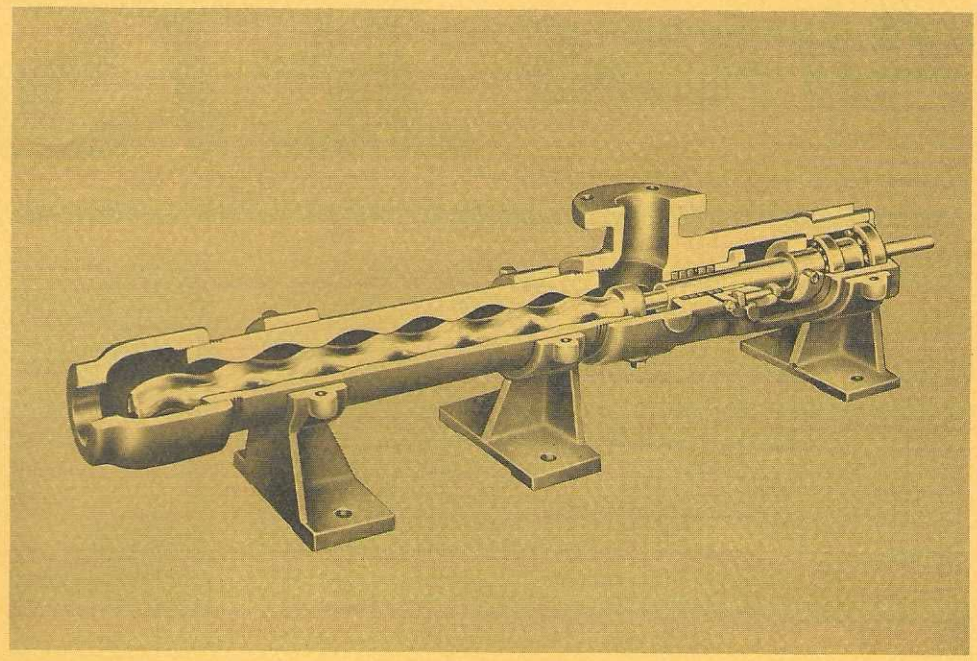

JETSPRAY is powered by a 5 H.P. gasoline engine turning a helical pump that produces a steady flow of material, even during intermittent operation.

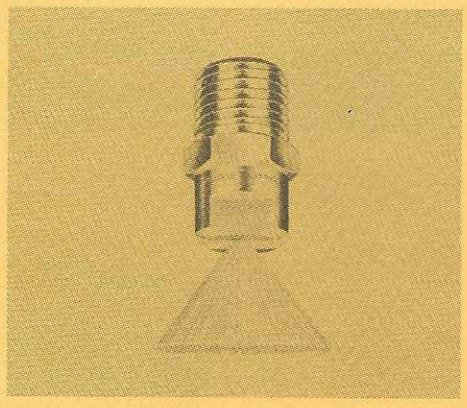

For more profit — Coat the modern way with JETSPRAY

Now you can JETSPRAY your way to better jobs with more profit at a lower cost!

- If it pours, why not spray it with JETSPRAY
- Being airless, it puts the coating on where you want it
- Costs less than any other machine in its field
- Can be used for a wide variety of coatings — almost anything that flows
- Why settle for less than the best?
- Job tested — Time proven
- Economical AIRLESS operation

The heart of JETSPRAY is this ingenious ROTOSTATOR pump. It has no pistons to leak, nor gears to wear. It has only one highly wear-resistant helical moving part — a screw-like rotor that rolls within a shaped housing delivering material to the operator under controlled pressures up to 350 lbs. with water and up to 1,000 lbs. with heavier coatings.

This specially designed stainless steel nozzle produces a fan-like spray to assure uniform application. Nozzles are available in various sizes. Four different ones supplied with each JETSPRAY machine.

SPECIFICATIONS

Height	44 inches
Length	54 inches
Width	29 inches
Total Weight	430 lbs.
Tank Capacity	125 gallons
Output	up to 7 gallons per minute
Pressure	up to 1,000 psi
Powered by	5 H.P. gasoline engine equipped with V-Plex friction clutch take-off.

Also supplied with 150 feet, ¾" heavy duty Buna-N-Lined hose, 4 assorted nozzles. Each JETSPRAY is delivered COMPLETE. No additional pumps or compressors needed.

A NEW DIMENSION IN ROOF COATING!

AIRLESS JETSPRAY

PATENTED

CONSIDER THESE EXCLUSIVE ADVANTAGES

JETSPRAY agitates, pumps and sprays any liquid, including abrasive, fibrous and asphalt base coatings — and emulsions, with controlled pressure and adjustable output.

JETSPRAY is designed and built to reduce the cost of roof coating application. JETSPRAY costs less because no air compressor is required, and only one hose is used on roof.

JETSPRAY has proven to save over 50% on roof coating labor and maintenance cost.

JETSPRAY is guaranteed one year against defective material and workmanship: plus a 10 day money-back refund if not satisfied, less freight, provided it is returned in good condition.

So for greater profits, coat and save with JETSPRAY!

The heart of JETSPRAY is the ingenious rotor-stator pump, which has only one highly wear-resistant helical moving part, which produces up to 250 pounds of pressure, and an output of up to 7 gallons per minute with uniform application, and very little overspray. The tank holds a full-length neoprene-bladed agitator to ensure uniform mixture. The agitator shaft is mounted on OILITE bearings and packed against leaks. Both pump and agitator are driven by a 4 H.P. gasoline engine equipped with a V-Plex friction clutch power take-off. Fuel consumption is less than one quart per tank of coating. The self-cleaning screen at tank outlet reduces clogging in the line. When properly operated, JETSPRAY will give years of dependable service.
